SUMMARY

Software Engineer and Web & Mobile Developer specializing in building responsive web applications using React and JavaScript, and cross-platform mobile applications using Dart and Flutter. Experienced in developing user-focused interfaces, implementing responsive designs, integrating APIs, and building functional application features across web and mobile platforms. Skilled in UI/UX design, Git, GitHub, and modern software development practices.

EDUCATION

BCs in Software Engineering at Jordan University of Science and Technology,
Arramtha, Jordan

October 2022 - September 2026

Grade: Very Good

SKILLS

Programming Languages: Flutter(Dart), JavaScript, HTML, CSS.

Tools & Technologies: Git & GitHub, VS Code, Figma, Android Studio, Umllet.

PROJECTS

BalaghJo (Mobile Application - Android) • [GitHub](#) • [APK demo link](#)

Smart Municipality Reporting System

A mobile application that allows citizens to report municipal issues such as potholes, waste, and streetlight problems. Users can submit reports with photos, descriptions, categories, and their location, then track the status of their reports from submission to resolution.

The system consists of a Flutter mobile application, a Node.js and Express.js backend, a MongoDB database. It also includes an admin dashboard for managing reports, updating their status, and monitoring reported issues.

Memory Vault (Web) • [GitHub](#) • [Try it!](#)

An interactive digital museum built as a frontend portfolio project. It explores the cultural and emotional significance of ordinary objects from cassette players and rotary phones to school notebooks and vintage radios — through visually appealing collections and detailed stories.

The experience is designed to feel nostalgic, elegant, educational, and story-driven like entering a real digital museum rather than a generic website. Built as a React (JavaScript).

Time Tracer (Web) • [GitHub](#) • [Try it!](#)

See where your day actually goes.

TimeTrace is a small, simple time-awareness tool for students. Record what you did and for how long, and TimeTrace turns it into a timeline, a category breakdown, and a few plain-language reflections all from data that never leaves your browser. Built as a React (JavaScript).

LANGUAGES

Arabic - Native

English - Conversational
